Alger, le 2 DEC. 2021

À Messieurs
Les Présidents des Conférences Régionales
des Universités (Est-Centre-Ouest)

Objet : A/S Programme ^Pangrois l'éducation conductive.

P.J : Brochure sur le programme (04).

J'ai l'honneur de vous faire parvenir ci-joint, émanant de l'ambassade de Hongrie par le biais ^{de} la faculté Andras Peto de l'université Semmelweis, une documentation relative à la promotion des cours de base de l'éducation conductive (EC), un programme qui offre un développement par les méthodes de l'éducation conductive aux enfants et jeunes adultes souffrant des handicaps moteurs dus à des lésions du système nerveux central, qui se tient en langue anglaise.

Je vous saurais gré des dispositions que vous voudriez bien prendre en vue d'en assurer une large diffusion auprès des établissements universitaires.

Practical training 43%

Theoretical and practical education integrating multiple disciplines

Unique training in the world

Immediate employment opportunity after graduation

Degree of high prestige and market value

Conductors around the world

"My role as conductor is to support people with minor impairment in their adaptation to the society... I hope that our charitable role spreads all over the world!"
Atsuo Kawamura - Japan

"Being a conductor is a thoroughly rewarding and humbling experience and I feel privileged to have had the opportunity to work in such a wonderful space... It's a privilege to help individuals find solutions to their own problems and assist them to be masters of their own lives, requesting opinions and advice."
Karen Birtwell-Webb - England

"I wanted to find someone who had the first group of deaf students. It was amazing to meet a young man who had been learning music, and I was able to help him with his own problems. I think you feel fortunate to turn me to who I am today."
Orill Rosenbluth - Israel

"Based on my personal and professional experience, I can not imagine a better location than the Center for Conductor Education for deaf spaces, but upon the ability of its professionals to adapt, I believe it is the best choice."
Roberto Riquelme - Brazil

"I started to conduct 14 years ago. I had a lot of difficulties with deaf students... Our daily work continues to support and positively influence lives of many, widening their ability of conductive education."
Ester Agos - Australia

"Conductors - in general - are a collection of people who usually have exceptional ability to get emotional responses, have a special character or people and by the way, it is special to be a conductor because of the uniqueness of the methods we studied for years..."
Melanie - New Zealand

"Being a conductor-teacher is more than an occupation - it's become an essential part of who I am as a person. At the heart of conductive education, you'll find optimism and the desire to let each and every person find the power to take action - no matter how small the step forward may be."
Drusha Miller, Aquinas College - USA

Scholarships:

The Hungarian Government provides different scholarships to support those people who want to study in Hungary. Such as Stipendium Hungaricum for participating in education on BA, MA, and PhD level. Conductor BA training is also supported and those who gained this scholarship can participate in the English (B2 level) or the Hungarian (B2 level) training form.

The other possible scholarship is the Hungarian Diaspora for those young people who have Hungarian origin and live outside of Hungary.

This training can be completed after graduation of secondary education or with other diplomas. The entrance to conductor BA is with the secondary graduation certificate. In case having another diploma, some of the previous education subjects will be recognised, therefore the study time can be shorter to some extent.

about us

Antepests of Ignaz Semmelweis

Hungarian physician Ignaz Semmelweis was an early pioneer of antiseptic medicine, discovering that the incidence of childbed fever could be drastically reduced by the use of hand disinfection in obstetrical clinics. Semmelweis's work was widely accepted when Louis Pasteur confirmed the germ theory of disease in 1861, the UNESCO recorded him in the list of "the world's most distinguished persons". The name Semmelweis is a historic trademark that obliges us to provide the highest quality education, scientific performance and care. Semmelweis University is moving forward on its way with an approach and strong determination trustworthy to Semmelweis's spirit.

Quality in education, research & innovation

Semmelweis University, based in Budapest, Hungary has been a leading institution of higher education in Hungary and Central Europe in the last 250 years. Its mission, research & innovation and healthcare comprise the three pillars of the university. With its six faculties and doctoral school, the university covers all aspects of medical and health sciences education and the research and development activities around the world. Semmelweis University is an official member of the European Union and by many other international communities. University students come from more than 70 countries, and the international student body accounts for nearly a quarter of the university.

Semmelweis University ranks among the TOP 500 universities of the world.

...and ranked among the TOP 500 universities of the world.

A short film about a Russian conductor with English subtitles.

András Pető Faculty

The world's only accredited conductor training – (now in English)

András Pető (1893-1967) was a Hungarian doctor whose internationally recognised professional work provided the foundation of conductive education. The history of development and rehabilitation goes back 70 years and the Faculty and its preceding institutions have more than 50 years of experience in conductor training.

The goal of the conductive education system or more renowned as Pető's method is the rehabilitation of persons with motor disorders originating from the damage of the central nervous system. The method was created by Dr. András Pető in the 1940s, whose main idea was that in spite of the damage, the nervous system has reserves and capacity to build new connections. Through appropriate control of the learning-teaching process, these reserves can be mobilised. One of the eminent goals of conductive education is teaching to learn i.e. developing learning skills irrespective of age. The conductive education system provides an opportunity to unfold all sides of one's personality and simultaneously cooperate with others, prepares for true integration.

Nearly 1,000 children and adults, both from Hungary and abroad, suffering mainly for motor impairments participate in permanent or interval conductive education in a day-care or residential system at the practice locations managed by the Faculty.
