Abstract:

During the last decade, ICT has attracted and fascinated a large number of teachers and learners, but have they been a real benefit to teaching?

This communication examines the innovative uses of Information and Communication Technologies (ICT) in education. To what extent ICTs are they really used?

To achieve what objectives? And get what results?

What paradigms did the teachers found to overcome the difficulties related to the physical isolation of learners?. And the new roles of these learners, what are they?

This communication deals with the innovative usages of IT's in teaching and addresses the following issues:

- Innovative teaching
- Active pedagogy
- Collaborative learning through problem solving and implementation of educational projects:
- Problem based learning Integrating IT's in university teaching
- Serious games
- Flipped pedagogy
- Differentiated teaching
- Blended learning
- Skills approach
- Mobile Learning
- Pedagogical use of social media, social networking and Web 2.0
- MOOCs
- Social learning or training 2.0
- Innovative Universities.
