Abstract

In this talk we provide some oscillatory and nonoscillatory results for fractional differential equations and inclusions. We make use of the method of upper and lower solutions, the diagonalization process, and suitable fixed point theorems.

Mathematics Subject Classification : 34A34, 34A60, 34C10, 34C15.

Keywords and phrases: Fractional differential equations and inclusions, oscillation, nonoscillation, upper and lower solutions, diagonalization process, fixed point.
